

Editorial Board

An international journal of physiology produced jointly by the International Union of Physiological Sciences and the American Physiological Society

Editor-in-Chief Walter Boron, New Haven, CT
Associate Editors Michael Caplan, New Haven, CT
Ulrich Pohl, Munchen, Germany
Special Advisor Gerhard Giebisch, New Haven, CT

Consulting Editors
Richard Aldrich, Stanford, CA
David Clapham, Boston, MA
Graham Dockray, Liverpool, UK
Reiko Fitzsimonds, New Haven, CT
Sten Grillner, Stockholm, Sweden
Susan Hamilton, Houston, TX
Donald Hilgemann, Dallas, TX
Reinhard Jahn, Göttingen, Germany
Baruch Kanner, Jerusalem, Israel
Amira Klip, Toronto, Canada
Evangelia Kranias, Cincinnati, OH
Jennifer Lippincott-Schwartz, Bethesda, MD
José Lopez-Barneo, Seville, Spain
Heini Murer, Zurich, Switzerland
Tullio Pozzan, Padua, Italy
William Sessa, New Haven, CT
Michael Welsh, Iowa City, IA

Editorial Coordinator
Charleen M. Bertolini

APS Publications Office
M. Reich, Director of Publications
J. Darago, Journal Copy Editor

Art Direction, J/B Woolsey Arts, Inc.
Patrick Lane, Design and Illustration
John D. Woolsey, Art Development/Editing and Illustration
Kelly Paralís, Illustration

IUPS/APS Joint Managing Board
K. E. Barrett, Chair
Akimichi Kaneko
Ewa Szczepanska-Sadowska
Jimmy D. Neill, IUPS Treasurer

Physiology (ISSN 1548-9213; ESN 1548-9221) is published bimonthly (one volume per year) by the International Union of Physiological Sciences and the American Physiological Society. Subscription Price (U.S. dollars): Institutional print only, \$230 U.S., \$235 Canada and Mexico, \$240 elsewhere; institutional print and online, \$250 U.S., \$255 Canada and Mexico, \$260 elsewhere; institutional online only, \$200; nonmember individual print only, \$160 U.S., \$165 Canada and Mexico, \$170 elsewhere; nonmember individual print and online, \$175 U.S., \$180 Canada and Mexico, \$185 elsewhere; nonmember individual online only, \$130; members of IUPS-affiliated societies print and online, \$75.00, postpaid. Subscriptions are accepted on a calendar year basis only. Single Copies, Back Issues: when available \$35.00 each, postpaid. Copyright © 2005 by the International Union of Physiological Sciences and the American Physiological Society. Printed in the United States of America. The code at the bottom of the first page of an article indicates copyright owner's consent that copies may be made beyond that permitted by sections 107 and 108 of the U.S. Copyright Law—unless the copies are for general distribution, advertising, creating new works, or resale—provided the per-copy fee is paid through the Copyright Clearance Center, Inc., 222 Rosewood Dr., Danvers, MA 01923. 1548-9213/05 \$8.00. Change of Address: The journal must be advised of a change of address at least 6 weeks before date of issue, with both the subscriber's new and old addresses given. Undelivered copies resulting from an address change will not be replaced. Editorial Inquiries: Walter F. Boron, Editor-in-Chief, *Physiology*, c/o Charleen Bertolini, Department of Cellular and Molecular Physiology, School of Medicine, 333 Cedar St., P. O. Box 208026, New Haven, CT 06520-8026. Subscription and Advertising Inquiries: *Physiology*, The American Physiological Society, 9650 Rockville Pike, Bethesda, MD 20814-3991.

PHYSIOLOGY

Volume 21, February 2006

Editorial 2
The International Union of Physiological Sciences

Highlights From the Literature 3

EMERGING TECHNOLOGIES

Patch Fluorometry: Shedding New Light on Ion Channels 6
Jie Zheng

Patch fluorometry is a technique to study real-time channel motion in membrane patches using simultaneous fluorescent and electrical recordings.

Cryo-EM and Single Particles 13
Liguo Wang and Fred J. Sigworth

Get your protein's structure, without growing crystals, by advanced electron microscopy.

REVIEWS

Strategies for Developing Therapeutic Application of Human Embryonic Stem Cells 19

Sudhanshu P. Raikwar, Thomas Mueller, and Nicholas Zavazava

Embryonic stem cells provide unparalleled opportunities for derivation of cells for immunotherapy and regenerative medicine.

Intrauterine Programming of Physiological Systems: Causes and Consequences 29

Abigail L. Fowden, Dino A. Giussani, and Alison J. Forhead

Intrauterine conditions during mammalian development program adult physiological phenotype and risk of disease.

Development and Regulation of Dendritic Spine Synapses 38
Barbara Calabrese, Margaret S. Wilson, and Shelley Halpain

Recent advances in imaging and molecular technologies reveal that spines are complex, dynamic structures.

AMPK: A Key Sensor of Fuel and Energy Status in Skeletal Muscle 48

D. Grahame Hardie and Kei Sakamoto

Contraction induces marked metabolic changes in muscle, and many of these now appear to be mediated by the LKB1 to AMPK cascade.

Ste20-Type Kinases: Evolutionarily Conserved Regulators of Ion Transport and Cell Volume 61

Kevin Strange, Jerod Denton, and Keith Nehrke

Ste20 kinases play evolutionarily conserved roles in cell volume sensing and in the regulation of ion transport processes important for cellular and systemic osmotic homeostasis.

Calcium-Activated Potassium Channels and the Regulation of Vascular Tone 69

Jonathan Ledoux, Matthias E. Werner, Joseph E. Brayden, and Mark T. Nelson

Differential expression of different types of Ca²⁺-activated potassium channels in endothelium and smooth muscle modulates vascular function.

On the cover: Dendritic spines are small membrane protrusions from neuronal dendrites that mark the post-synaptic structure of excitatory synapses in the brain. Recent work (see Calabrese et al., page 38) has revealed that spines contain an organized array of specific cytoskeletal, scaffolding, and signaling molecules. (Illustration by Patrick Lane)
