REVIEWS

Calorie Restriction: Is AMPK a Key Sensor and Effector? 214
Carles Cantó and Johan Auwerx
This review discusses the current evidence on whether AMPK could be a mediator of the beneficial effects of calorie restriction on health/life span.

Circadian Rhythms, Aging, and Life Span in Mammals 225
Oren Froy
Resetting the circadian clock leads to well being and increased life span, whereas clock disruption is associated with aging and morbidity.

New Insights into HIV Assembly and Trafficking 236
Muthukumar Balasubramaniam and Eric O. Freed
This review highlights the current understanding of the cellular machinery involved in Gag trafficking and virus assembly.

Protons and Ca2+: Ionic Allies in Tumor Progression? 252
Maike Glitsch
In this review, a role for proton-sensing ion channels and GPCRs as mediators of the effects of extracellular protons in cancer cells is discussed.

Differentiation of Intercalated Cells in the Kidney 266
Qais Al-Awqati and Xaio Bo Gao
This review discusses recent work that shows that the α form of the intercalated cell of collecting ducts of the kidney is derived from the β form and that the pathway is mediated by an extracellular matrix protein called hensin/DMBT1.

A Cool Channel in Cold Transduction 273
Ramón Latorre, Sebastián Brauchi, Rodolfo Madrid, and Patricio Orio
TRPM8 channels found in sensory neurons allow us to determine when a white wine is at the right temperature.

Itch Signaling in the Nervous System 286
Joseph Jeffry, Seungil Kim, and Zhou-Feng Chen
This review examines some of the molecular mechanisms underlying itch sensation with an emphasis on recent studies in rodents.

Dynamic Neural Control of Insect Muscle Metabolism Related to Motor Behavior 293
Hans-Joachim Pflüger and Carsten Duch
This review describes how the activity of octopaminergic neurons modulates synaptic transmission and energy metabolism of insect muscle, thus providing a switch from a tonic to a dynamic state necessary for all locomotor behaviors.
