Phosphodiesterases Maintain Signaling Fidelity via Compartmentalization of Cyclic Nucleotides

Oliver Lomas and Manuela Zaccolo

This review describes the current understanding of how cyclic nucleotide signaling may be finely controlled and targeted, in particular through the localized action of PDEs.

REVIEWS

If Body Fatness is Under Physiological Regulation, Then How Come We Have an Obesity Epidemic?

John R. Speakman

This review looks at the physical facts that underpin the energy utilization processes in living organisms and the interesting biological questions they raise.

AMPK: Regulating Energy Balance at the Cellular and Whole Body Levels

D. Grahame Hardie and Michael L. J. Ashford

This review discusses the two distinct levels at which the AMPK system operates.

Sex Differences in the Developmental Origins of Cardiovascular Disease

Suttira Intapad, Norma B. Ojeda, John Henry Dasinger, and Barbara T. Alexander

This review highlights the potential mechanisms that contribute to the etiology of sex differences in the developmental programming of cardiovascular disease.

Neural Mechanisms of Cardioprotection

Andrey Gourine and Alexander V. Gourine

This review highlights the importance of neural mechanisms in protecting the heart against lethal myocardial ischemia/reperfusion injury.

Phosphodiesterases Maintain Signaling Fidelity via Compartmentalization of Cyclic Nucleotides

Oliver Lomas and Manuela Zaccolo

This review describes the current understanding of how cyclic nucleotide signaling may be finely controlled and targeted, in particular through the localized action of PDEs.
