The Evolution of Unidirectional Pulmonary Airflow 260
C. G. Farmer
Contrary to conventional wisdom, unidirectional pulmonary airflow is not unique to birds; it is found in a variety of reptiles.

The Hibernation Continuum: Physiological and Molecular Aspects of Metabolic Plasticity in Mammals 273
Frank van Breukelen and Sandra L. Martin
Review of metabolic depression and body temperature fluctuation in mammals, with a focus on the extreme example of hibernation in small-bodied eutherian species.

Performance Enhancement: What Are the Physiological Limits? 282
C. Lundby and P. Robach
This review highlights some key physiological determinants of endurance exercise performance and discusses how these can be further improved.

Putting the Squeeze on Airway Epithelia 293
Jin-Ah Park, Jeffrey J. Fredberg, and Jeffrey M. Drazen
Excessive mechanical compressive stress exerted upon the airway epithelium, as occurs during bronchoconstriction, is sufficient to induce airway remodeling in asthma.

Humans In Hypoxia: A Conspiracy Of Maladaptation?! 304
Jerome A. Dempsey and Barbara J. Morgan
Proposition that hypoxia presents to most humans a multifaceted insult to O2 transport, which is poorly tolerated because of substantial physiological cost.

Calcium Sensing in the Renal Tubule 317
Hakan R. Toka, Martin R. Pollak, and Pascal Houllier
Review of current data on the calcium-sensing properties of the kidney, the localization of the CaSR protein along the nephron, and its function in calcium homeostasis and in hypercalciuria.

The Physiology of Proinsulin C-Peptide: Unanswered Questions and a Proposed Model 327
Gina L. C. Yosten and Grant R. Kolar
Proinsulin C-peptide may play an important role in the modulation of insulin signaling.

Physiology Education 252
A World Perspective. Promoting Physiology Research in Africa: Leveraging Pockets of Excellence 254
Undergraduate Physiology Degree Programs in the United States: from Famine to Feast 256
