Heroes come in many forms

Professor Damian Bailey
Director of the Research Institute of Science and Health, University of South Wales, UK

“We are interested in how the ageing human brain functions across the spectrum of health and disease, from super-fit athletes to super-sick patients. Our research focuses on the mechanisms that control oxygen transport to the brain, quite simply how we get the most important molecule in the world to the most important organ in the body.”

Pushing the limits of human performance to understand the ageing brain.

Your DAQ needs are safe in our hands

For more than four decades life scientists and researchers around the world have relied upon CED data acquisition systems. From simple chart recordings to the most complex multi-channel spike sorting – our systems do it all without compromise.

The powerful hardware and software are easy to use and offer great value for money with unrivalled customer support.

Rest assured – you’re in safe hands when you choose a CED system.
